

Coding & Solution

Date	30 September 2026
Team ID	SWTID-2026-1307
Project Name	Script-Controlled ACL-Restrict Record Access Based on Field Value.
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	[github.com] - unga GitHub link inga paste pannikalam
Programming Language(s)	JavaScript, GlideScript (ServiceNow Server-side JS)
Framework(s) Used	ServiceNow Platform, Glide API
Key Features Implemented	Scripted ACL creation based on field value Reusable Script Include for access check logic Role-based restriction for

	confidential records Graceful error handling for unauthorized access Field-level validation (e.g., confidential == true)
Pending / Incomplete Features	None - All core features implemented. Future enhancement: Dynamic field mapping for multiple tables

Setup / Run Instructions

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	yes
2	Meaningful variable and function names are used	yes
3	Code includes comments / documentation where necessary	yes
4	Error handling is implemented for critical operations	yes
5	The application runs without critical errors	yes
6	Code is committed to a version control repository	yes

Additional Notes / Comments:

All code is written in JavaScript following ServiceNow best practices. Script Includes are modular and reusable. Proper comments added for ACL logic. No critical errors during execution. Code pushed to GitHub repository.
